

Bookstore Management System — Execution Steps

Step-by-step instructions to configure and run the frontend (React + Vite) and backend (Express + MongoDB) for the Bookstore Management application.

React (Client)

Express (Server)

MongoDB

Nodemon

FRONTEND URL

`http://localhost:5173`

BACKEND URL

`http://localhost:8000`

1 FRONTEND Set Up the Frontend (React App)

a) Navigate into the client folder

```
cd client
```

Run this from the project root, in your terminal.

b) Start the React development server

Once installation is complete, launch the Vite dev server.

```
npm run dev
```

c) Confirm the app is running

Frontend live at: `http://localhost:5173`

2 BACKEND Set Up the Backend (Express Server)

a) Open a new terminal tab/window

Split your terminal or open a second window/tab to run the backend alongside the frontend.

b) Navigate into the server folder

```
cd ../server
```

3 CONFIGURATION Configure Environment Variables

Create the environment file

Inside the server folder, create a new file named `.env` (no additional file extension).

server/.env

```
MONGO_URI=mongodb://localhost:27017/bookstore
```

4 BACKEND Start the Backend Server

Run the server with Nodemon

Inside the same server folder, start the backend using:

```
nodemon index.js
```

Backend live at: `http://localhost:8000`
